

I built my *superintelligent* AI setup.

Ten installable skills and two bootstrap prompts that climb a six-rung ladder, from chatting as search to a system that runs while you sleep. Sanitized, MIT licensed, yours.

11 skills

INSTALLABLE

2 prompts

MEMORY PLUS INTERVIEW

1 weekend

TO SET UP

BEFORE WE START, ONE CONTRAST

~~6 months~~

COMMON ASSUMPTION, TO

A weekend.

The default estimate is wrong by *an order of magnitude*.

No code. No vendor. No six-month transformation programme. Eleven installable skills, two bootstrap prompts, and a five-round setup interview that designs your personal stack. The blueprint is in the next ten slides.

THE SUPERINTELLIGENCE LADDER

Six rungs. Most pros sit at *Level 1 or 2.*

Levels 1 and 2 deliver isolated wins. From Level 3 onwards *value compounds week over week*. Memory sharpens. Skills refine. Agents earn trust. The toolkit takes you to Level 5.

Eleven skills. Two bootstrap prompts.

SKILLS, AUTO-TRIGGER AS A CLAUDE PLUGIN

01.	Brand Voice	Your company voice as a template.
02.	Animated Slideshow	Patterns for single-file HTML decks.
03.	Board Panel	Five-lens panel before any decision.
04.	Department Router	Route a query to the right function lens.
05.	Quality Gate	Eight-check verification after every output.
06.	Commentary Engine	Five-move narrative on any numbers.
07.	Morning Brief	Daily scheduled briefing, under five minutes.
10.	Sensitivity Templates	Five fallbacks for data you cannot paste.
11.	Superintelligence Ladder	Self-assess where you are on six rungs.
12.	Prompt Power-Words	Five switches from fast to careful, next slide.
13.	Sparring Partner	Year-long quarterly-themed coaching. Weekly sessions, 12-month arc.

BOOTSTRAP PROMPTS, PASTE ONCE, SAVE THE MEMORY

08.	Memory Bootstrap	Tells Claude who you are and how you work.
09.	Setup Interview	Five rounds. Outputs your personal roadmap.

LAYER 00, THE INVISIBLE SUBSTRATE

Memory is what makes *everything compound.*

Without persistent memory, every conversation starts from zero. With memory, Claude knows who you are, where you work, how you write, what you decide. Every skill in the kit reads from it. The bootstrap is five minutes, once.

WHAT THE MEMORY BOOTSTRAP CAPTURES

USER	Who you are. Role, collaboration style, writing preferences.
COMPANY	Where you work. Industry, listing status, jurisdiction, tools, operating cadence.
FEEDBACK	How you work. Lead with insight, ranges for forward-looking numbers, cite sources.
PROJECT	What is happening now. Current initiatives, owners, deadlines, why each matters.
REFERENCE	Where the truth lives. Calendar, documents, chat, risk register, regulatory tracker.

No memory means generic output forever. The bootstrap prompt is in the repo, ready to paste.

SKILL 12, THE FIVE POWER-WORDS

Switch Claude from *fast* to *careful*.

Add the word at the start of the prompt. That is the whole pattern. Each one asks Claude for a different kind of effort.

ultrathink

Reason longer. Hard analytical questions, risk assessment, decisions with downside.

maxeffort

Commit to the best output, not the fast one. Board-grade deliverables, investor communications.

ultraplan

Map the whole thing before doing any of it. Multi-step projects, migrations, onboarding plans.

run the panel

Convene expert perspectives. Decisions where reasonable people disagree, pre-mortems.

critique yourself

Review your own draft from a specific lens before declaring done. Catch the obvious flaw before you send.

Eight checks that *catch the slop*.

THE RULE

Never declare done *with an open fail*.

- | | |
|---|---|
| 1. Factual accuracy. Every name, number, date traceable. | 5. Completeness. The question, not the adjacent one. |
| 2. Source citation. Listed. Primary versus secondary. | 6. Reasoning quality. Logic visible. Numbers add up. |
| 3. Brand and voice. No filler, no AI tells. | 7. Audience fit. Plain language where it should be. |
| 4. Regulatory alignment. GDPR, EU AI Act, IFRS where they apply. | 8. Tactical sanity. Owner, date, next action. |

Four agents on *schedule*. Three daily, one weekly arc.

An agent is a skill on a schedule. Read-only by default. Surfaces and links, never commits anything on your behalf. The four I actually run:

06:30 EVERY WORKDAY	Morning Brief	Tomorrow's calendar, briefed. The one meeting that matters. The one inbox item to handle before 09:00.
07:00 EVERY WORKDAY	Market Insights	Sector scan, filtered against my profile. Three items that matter. The rest is noise, skipped.
Mon 08:00 WEEKLY	Regulatory Radar	EU AI Act updates, GDPR cases, sector regulator activity. Compliance signal before the board meeting.
Fri 16:00 WEEKLY, THEMED BY QUARTER	Sparring Partner	Year-long professional development. Quarterly themes, weekly sessions on sub-elements. The coaching agent.

SKILL 10, WHEN THE DATA CANNOT BE PASTED

Five fallbacks for *sensitive data*.

Board materials. Personal data of others. Market-sensitive numbers before publication. Pre-cleared against EU AI Act and GDPR exposure. Most personal AI setups fall apart here. These five patterns do the work without the paste.

1.	HTML report shell	Brand-true layout, placeholders for numbers. Fill in locally.
2.	Excel anonymizer	Hash names to IDs. Analysis on anonymized tab only.
3.	PPTX redaction	Narrative plus chart placeholders. Finish offline.
4.	Python preprocessor	Local script strips identifiers. Outputs anonymized file.
5.	Custom software bridge	For systems with no connector. Export, transform, prompt clean.

THE OPEN-SOURCE STACK I RUN ALONGSIDE

Four projects that make *the kit* work.

LAYER 00, MEMORY

Mempalace

File-based persistent memory. Without memory, your bootstrap reloads every conversation.

PATTERNS LIBRARY

fabric

Daniel Miessler's curated prompt library. Use as cold-start when building a new skill.

MULTI-MODEL ROUTING

LiteLLM

One API for every major LLM. A/B test the same skill across providers.

SELF-HOSTED UI

Open WebUI

When your company forbids external LLM but lets you run inference internally.

This repo is the part I wrote. These four are the rest. fabric gives you patterns. This kit gives you a stateful system that remembers you. All MIT or equivalent. All linked in the DM.

WHAT YOU GET BACK

Four shifts within *two weeks*.

Shift 01

Hours back on your calendar.

The fifteen-minute increments that bled your week. Drafting, briefing, summarizing. The skills absorb them.

Shift 02

Sharper decisions, less alone.

The board panel rehearses your hard calls before the room does. The router pulls the right lens on every query.

Shift 03

Quieter mornings.

Tomorrow's brief is written before you wake up. The day starts already briefed.

Shift 04

Compounding leverage.

Memory gets sharper every week. Skills get refined. The system improves itself.

A weekend of setup. A system that gets sharper every week you use it. You do not own a tool, you own the system.

YOUR MOVE

Want the *full kit*?

Eleven installable skills, two bootstrap prompts, the install guide, the governance memo, the curated open-source stack. Free to use. Sent personally, by DM.

01 **Comment [SAI](#) below.**

I send the GitHub link and the open-source stack. One DM, no funnel.

02 **Save this post.**

Sunday-night reading. The Ladder is the map. Find yourself, take the next step.

03 **Pass it on.**

To the colleague still copy-pasting into ChatGPT and wondering why it feels generic.

BUILT IN THE OPEN. FREE TO USE. NO VENDOR LOCK-IN. NO EMAIL GATE.
